Graph DB agnostic

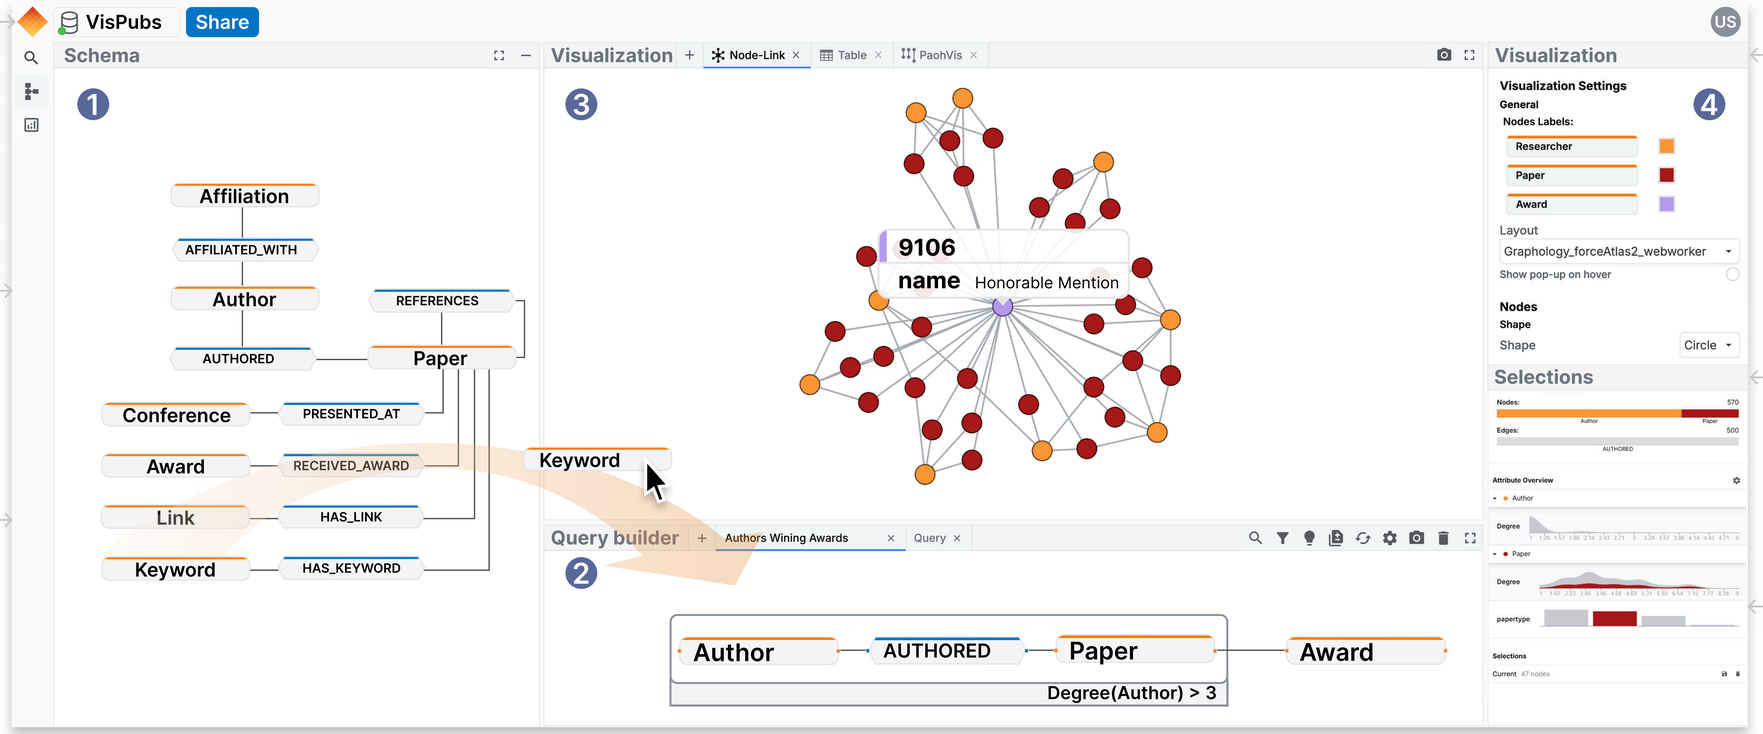

Connect to **arbitrary Graph Databases**

Schema Vis

Displays **all query possibilities** the graph database can answer

No-Code VA

On-the-fly query building without query syntax knowledge + ML support

Visualizations

Real-time exploration with **14 configurable graph/non-graph visualizations**

Statistics

Topological & attribute statistics for the DB/ result set/ selection

GPQL

GraphPolaris Query Language, database-agnostic formal intermediate represent.

1 Analysis Question

"What are all papers with three or more authors that won an award?"

2 Query in GPQL

$(Author_1\ AUTHORED_2\ Paper_3)$
$[degree(Author_1) > 3]\ RECEIVED_4\ Award_5$

3 Visual Analysis

The node-link diagram shows connections between node types

4 Visualization Configuration

Configure visualizations and inspect selections
